

# linuxLab Unit 6

Christian Kniep

Internation Center of Applied Technologies Bandung

1. September 2010

## create,find,manipulate and execute

Create a folder named as your user in `/var/linuxLab/unit6` and...

- 1 ...create 10.000 files named \$RANDOM.txt (environment-variable) in 100 folder

## create,find,manipulate and execute

Create a folder named as your user in `/var/linuxLab/unit6` and...

- 1 ...create 10.000 files named \$RANDOM.txt (environment-variable) in 100 folder
- 2 ...find files with odd numbers and make them executable.  
(play around `expr 5 % 2`)

## create,find,manipulate and execute

Create a folder named as your user in `/var/linuxLab/unit6` and...

- 1 ...create 10.000 files named \$RANDOM.txt (environment-variable) in 100 folder
- 2 ...find files with odd numbers and make them executable.  
(play around `expr 5 % 2`)
- 3 ...find executable files and implement a 'Hello World'-Programm in them

## create,find,manipulate and execute

Create a folder named as your user in `/var/linuxLab/unit6` and...

- 1 ...create 10.000 files named \$RANDOM.txt (environment-variable) in 100 folder
- 2 ...find files with odd numbers and make them executable.  
(play around `expr 5 % 2`)
- 3 ...find executable files and implement a 'Hello World'-Programm in them
- 4 ...execute every executable file and redirect the output to `username.out` in `/var/linuxLab/user/`
